

CASTLEREAGH
FEEDS

The Healthy Choice

Heat Rating

Suitable for pigs from
8 weeks of age 18Kg - 109Kgs.

- 100% All natural!
- Castlereagh's Premium Vitamin & Mineral Premix will give your animals the gift of health and vitality.
- Excellent feed conversion rate.
- Processing is minimal to help every grain hold it's natural goodness that can be lost through over processing, cooking or extruding.
- Gentle steam pelleting locks in the natural nutrition for easier digestion & absorption.
- Soybean meal and lupins supplying quality amino acids for rapid growth.
- Low grain, no oat content provides slow release of cool energy, minimising digestive disturbances.
- Economical feeding solution.

ALPACA PELLETS

GENERAL FEEDING GUIDELINES

If you exceed 20% of pellets or grain in the total daily ration, there will be an inhibition of cellulolytic microbe activity, which will further depress the digestibility of the feed. The diet needs to be at least 25% crude fibre, and of this at least a quarter should be greater than 4 cm long, which precludes a diet of pure chaff-alright for crude fibre, but not fibre length.

Alpaca innards are not really designed for high grain diets, especially large grains. Whole corn in the diet can lead to the formation of stones called gastroliths which can jam in the large bowel, and a proportion of any uncracked grain seems to pass through the critters, much to the delight of the galahs fossicking through the poo-piles.

It is better to feed cracked or rolled grain in a long thin line on the ground, rather than in a trough. A large mouthful of grain hurriedly swallowed can lead to choke, which is distressing to the animal as well as the observer. Fed in a long line on the ground means the alpaca has to scrounge smaller mouthfulls rather than gulp larger ones.

*All natural, economical Alpaca pellets.
High protein, all natural Alpaca pellets for healthy Alpaca's that
will make them look good and feel great.*

FEEDING SUGGESTION

	Live weight	Alpaca Pellets Per animal/daily	Lucerne Chaff
Young growing alpacas	50 Kg	0.25 - 0.7 Kg	Ad Lib
Adult alpacas	70 Kg	0.25 - 1 Kg	Ad Lib

The daily feeding rate of Alpaca Pellets will vary depending on a number of factors such as body weight and condition, pregnancy status/stage of pregnancy, stage of lactation, level of milk production, activity and quality of the fodder (roughage) being fed. Generally an alpaca's daily dry matter intake will range from 2% to 3% of their body weight; comprising fodder such as pasture, hay or silage and a supplement like Alpaca Pellets. Typically Alpaca Pellets are fed at between 0.75% to 1.5% of body weight per day and should be introduced gradually along with good quality roughage such as hay, chaff or pasture until the desired amount is reached. Do not make sudden changes to feeding rates as digestive problems may occur. In the event that digestive problems are observed, substantially reduce, or cease feeding Alpaca Pellets and increase amount of roughage fed until normal digestive activity resumes. Ensure that hay and fresh clean water are available at all times.

INGREDIENTS

Steam rolled barley, wheat bran, wheat pollard, soybean meal, calcium magnesium carbonate (dolomite), salt and Castlereagh Premium Vitamin & Mineral premix.

NUTRITIONAL INFORMATION

Protein (%)	16.0	Vit B2 Riboflavin	4.4 mg
Fat (%)	4.0	Vit B12	0.012 mg
Fibre (%)	15.0	Niacin	11 mg
Digestible Energy (Mj/Kg)	11.0	Vit B6 Pyridoxine	0.58 mg
Salt Maximum(%)	1.0	Vit B1 Thiamine	2.2 mg
		Choline Chloride	66 mg
		Biotin	0.04 mg
		Cobalt as sulphate	0.03 mg
Calcium	8.12 g	Iodine as potassium iodide	0.066 mg
Phosphorus	8 g	Selenium as selenite	0.16 mg
Magnesium	6 g	Copper as sulphate	10 mg
Vit A	3,333 iu	Iron as ferrous sulphate	23 mg
Vit D3	333 iu	Manganese as sulphate	25 mg
Vit E	60 mg	Zinc as oxide	25 mg
Vit K	0.8 mg		
Cal Pantothenate	4.8 mg		
Folic Acid	1.08 mg
